

# Und-Aware™ B-500

## A-500

### Specifications:

**Anti-Terrorism! Anti Drug! Force Protection!**

**Look for ... Explosives ... Weapons ... Targeted or Stolen Vehicles ...!**

Search the full width and length of any size vehicle, in real time. VIT's patented automatic AirWash™ ensures a clear image in any weather. Review and playback your just-recorded vehicle and compare the current composite-image scan with one previously recorded. Stored along with your vehicle scan is our custom Driver-Image picture. And you can add a fully integrated Automatic License Plate Reader along with other biometric sensors to complete your gate-control package.

The Und-Aware™ A&B 500 systems provide four to eight high-resolution (NTSC or PAL) color camera images for sharp detail, wheel-to-wheel. Base assembly units incorporate the AirWash™ components, lights and readily replaceable camera modules. Special end modules provide a smooth ground transition, or connect to VIT's versatile, protective cable management system. An easy-to-use integrated unit within the security facility controls the cameras and AirWash™ in full "A-76 (minimum-man)" compliance. The control system features a COTS Network Video Recorder for easy integration with existing security installations.
